

## CASE STUDY

### CASE FACTS...

Water needs

- Farm in an environmentally sensitive area with stream feeding major South West Water reservoir
- Livestock to be kept out of the stream but using mains water is expensive

Cost of Papa Pump £1,200+ VAT £6,000+ VAT Cost of infrastructure **TOTAL INSTALLATION** £7,200+ VAT £4,000 per year mains water cost saving **Return on Investment** less than 2 yrs

#### **ENVIRONMENTAL SOLUTIONS**

- Water kept clean by fencing off river
- Pump uses no fuel and therefore has ZERO EMISSIONS
- small and discreet pump with minimum visual impact

**PART FUNDED WITH** £1800 GRANT FROM CATCHMENT SENSITIVE **FARMING** 

6m³ per day

Papa Pon

the pump that uses no fuel!

**UP STREAM** WATER PROTECTION AND FREE WATER FOR YEARS TO COME

We needed to keep the livestock out of the stream which feeds into Roadford Reservoir. It would have been expensive to use mains water for the livestock so we installed a Papa Pump. With a little help I installed all the infrastructure and pipework, fenced off the stream and, because this is an environmentally sensitive area, landscaped the stream with rocks. Give it a few years and you wouldn't know there was a pump here.

Now the Environmental Agency are happy, the pump is just pumping away, lifting water 45 metres to a storage tank (top pic) on the top field for livestock watering, its running costs are next to nothing, and I'll have free water for many years to come.

**ROB SHINN - Seccombe Farm** 

# THE PROBLEM

Water from the farm drained into a major reservoir in an environmentally sensitive area and needed protection from livestock pollution. Replacing the water needed with mains water would be expensive. There was also a need to deliver the water to the livestock on the higher fields.

# THE SOLUTION

By installing a single Papa Pump they were able to fence off the stream and deliver 6m3 of water a day to a height of **45m** for livestock watering. This negated the need to use expensive mains water and will supply free water for generations to come.

The weir was landscaped and 'leaky dams' were also put in the stream to regulate the flow. After a very short time, it will be very difficult to detect that there is a working pump at the site. The Environmental Agency had no problem approving this installation.

#### **The Papa Pump** The Papa Pump The Green Alternative **Mains Water** 10000 CO₂e Emissions **Cost Comparison** 32 9000 28 **Mains Water** 24 £10,000/year\* 6000 음 20 Papa Pump ē 500<u>0</u> 16 4000 **ZERO** 12 **ENERGY** COSTS! . Comparison is based on South West Water (UK) These results show the estimated amount of CO2 emissions generated by pumping 20m³ a day to a height of one hundred metres, over a ten year period. tariffs (Feb 2016) to deliver 5,000m3 per ye (Tariffs vary in different regions and countries)

## THE PAPA PUMP KIT CONTAINS

1 x PAPA PUMP

1 x 8L PRESSURE VESSEL

2 x SERADISC FILTERS

1 x 2" SHUT OFF VALVE
